

# Anewgo Websites - Release Notes - February 5, 2026

## Website & Design Flexibility

### Better page and section controls

- **Tons of New Sections!**

Now all sections are available for all themes. This means no matter what theme you have, you have new sections to experiment with.
  - **Enable/disable custom pages like global pages**

You can now **disable custom pages** in a way that's consistent with global pages. When disabled, the page returns a standard "not found" (404), so visitors don't access work-in-progress or retired pages.
  - **Better Rich Text editing**

Editors now clearly show that they support multiple lines.
  - **Mobile image positioning control**

For "Text Image Columns" sections, you can now **choose where the image appears on mobile** (top or bottom), independent of desktop layout to fine-tune mobile storytelling.
  - **Cleaner footer when no image is set**

If you don't configure a footer image, the site will no longer show "**Image not Found**".
  - **Minor visual and content polish**
    - Fixed CTA order in the Elegant theme's Hero A section.
    - Fixed a typo in section warnings.
    - Corrected behavior of secondary actions in "Text Over Image" sections.
    - Resolved an issue with blog CTAs that caused errors when adding a call-to-action to a Simple Hero block.
- 

## Community & Inventory Management

### Better support for complex school district setups

- **Multiple school districts per community**

Communities can now be assigned to **more than one school district**. This is especially important for builders in areas where boundaries overlap.
- **School districts at the lot level**

Lots can now inherit school districts from their community, making it easier to present accurate information on specific homesites without re-entering data.

## Community & inventory pages

- Communities now support **additional external links**, designed to handle things like:
  - Self-guided home tours (e.g., NterNow)
  - Interactive community maps (e.g., pano maps)These links can be used as call-to-actions or open in popups/new tabs from the community detail page.

The screenshot shows the OneWigo Communities management interface. The left sidebar contains navigation options: Content Dashboard, Manage Media, General, Team, Communities (selected), Lots, Color Tool, Plans, Collections, and School Districts. The main content area is titled 'Communities' and shows the 'Golden Gate' community details. The 'Info' tab is active, displaying fields for Name, Type, Description, Internal Note, Model Available for Tour, Phone Number, Email, Calendar Link, MLS Id, External Link #1, External Link #2, External ID, HOA Fee, and Tags. The 'Description' field contains the following text:   
**Now Selling!**  
Some places just feel right. Golden Gate at Sreet Club is one of them. A rare pocket of High Point where everything you love is right around the corner - coffee on the way to work, dinner with friends, a weekend game at High Point University, yet home still feels like a peaceful landing place at the end of the day.  
This community isn't just well-located, it's well-designed. With an exclusive selection of just 16 homesites, thoughtful floorplans, bonus designer curated interior packages, and everyday convenience that makes life feel easier, Golden Gate at Sreet Club brings together everything you've been searching for.  
The 'Internal Note' field contains: Marketing Begins 12/11/23, Opens for Sales in Feb 2026. A 'Use Custom Address' button is highlighted at the bottom left of the form.

- **More control over sales center locations**  
Sales centers and model homes can now have an **address independent from the community**. This is useful when the sales office is not within the community.

The screenshot shows the OneWigo Sales Center management interface for 'Anewgo Homes'. The left sidebar is the same as in the previous screenshot. The main content area is titled 'Sales Center' and shows the 'Sales Center Image' field with a photo of a house. Below the image is the 'Virtual Tour Link' field with the URL: <https://vtr.1newgo.com/client/GarmanHomes/BoisandBeauhur/vTX/index.htm>. The 'Description' field is empty. The 'Hours' section contains two time slots: Sun (01:00 PM - 06:00 PM) and Mon - Sat (10:00 AM - 07:00 PM). A 'Text' field contains: Self-Guided Tours are available for some homes. A 'Use Custom Address' button is highlighted at the bottom left of the form. A success message 'Successfully updated sales Center' is displayed at the bottom right.

- **Scattered Lot improvements**
  - Builders can optionally show **Scattered Lot Quick Move-Ins on the main QMI page** instead of just on the Scattered Lot page.
- **Cleaner display of elevations and pricing**
  - Elevations in collections on the Community Details page now show the **correct, community-specific default elevation and pricing**.
  - Elevations in the lot modal are now **sorted alphabetically**, making them easier for buyers to scan.
- **Plan collections respect state filters**

State filters now apply correctly to **plan collections** on the Plans List, so buyers only see relevant plans for their chosen location.

## Forms, Leads & Content Insights

- **Form submission counter**

There's now an easy way to see **how many times each form has been submitted**.

  - Forms are listed in a table with name, destination email, and submission count.

TITLE	EMAIL	TYPE	STATUS	RESPONSES
test	leeprinc@hotmail.com	Custom Form	Active	0
Website Leads	beth@anewgo.com	Custom Form	Active	0
Contact Test	automated_testing@anewgo.com	Custom Form	Active	0

## SEO & Performance Insights

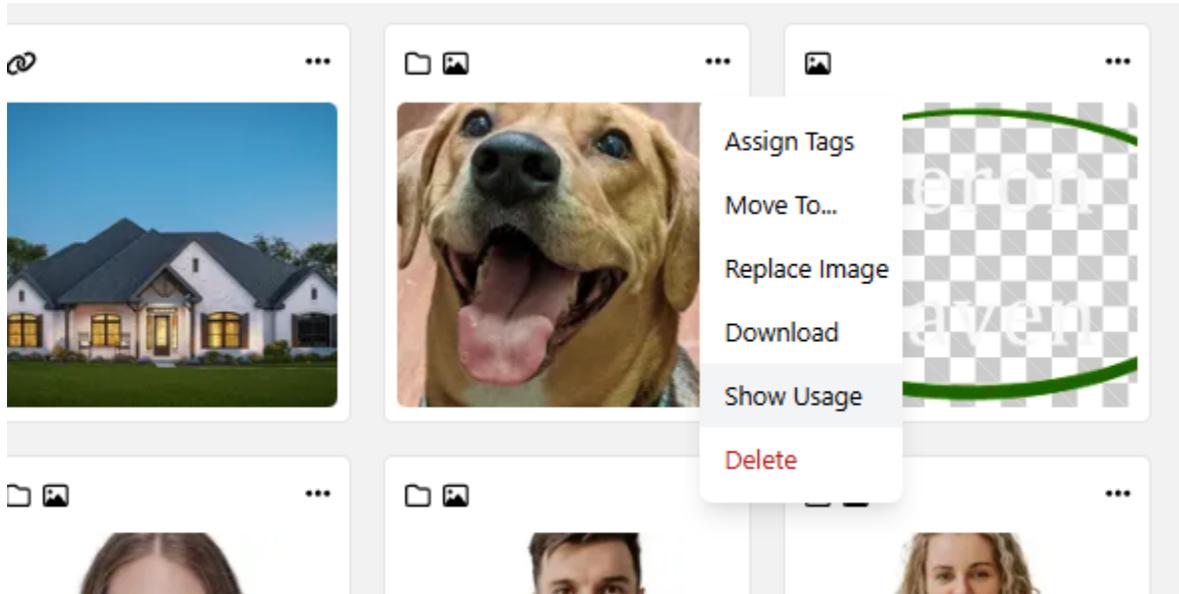

- **Correct schema markup for homes and listings**

We've made several improvements to your site's structured data (used by search engines like Google)
- **Analytics event handling (Spectre)**

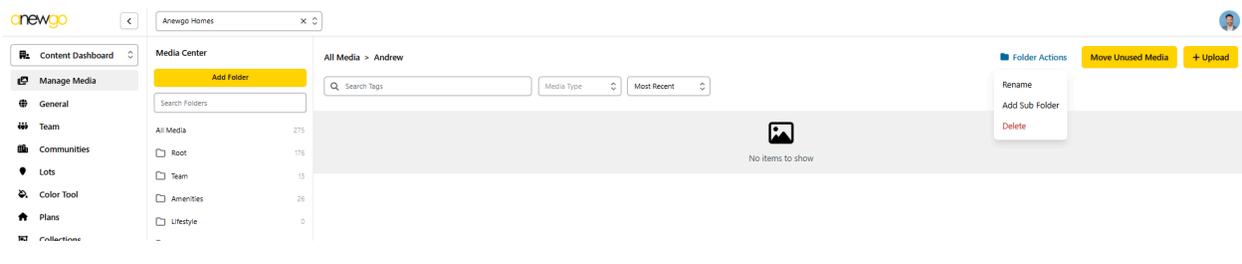

Improved how certain tracking events are processed when marketing tags (UTM parameters) are missing, helping keep analytics data more robust.

## 📁 Smarter Media & MHA 3.0

- See where an image is used before you delete or change it

- Create folders and subfolders for your media

- Automatic cleanup of unused images
