

# Anewgo Websites - Release Notes - July 1, 2026

## ✨ What's new

### Build richer website experiences

- **Media Library Document Linking:** In addition to now being able to upload PDFs, you can now add more content to custom pages by linking directly to uploaded files and documents from the media library to easily share brochures and resources.
- **New Ways to Link Media Library Content:** Call To Action buttons can now be set to a new **Media** Action Type, allowing you to link buttons directly to files and documents from your media library
- **HTML Rich Text fields now support Attachments,** letting you create a hyperlink within your text content that points directly to a file from your media library.
- **Custom Page Cloning:** Custom pages can now be cloned instead of rebuilt from scratch, helping you create similar pages faster and keep layouts consistent.
- **Blog Content Previews:** Blog content can now be previewed before publishing so you can review the layout, images, and messaging before it goes live.
- **Dedicated Community Virtual Tours:** Community pages now support a dedicated Virtual Tour section, which can be managed directly from the Community Media tab in the Content Dashboard.
- **Custom Quick Move-In Titles:** The Quick Move-In Homes section can now use a custom title, giving you more control over how available homes are presented to shoppers.
- **Gallery Video Support:** Gallery components now support video links, allowing you to choose video links from the media picker, filter for video content, and feature videos alongside images.

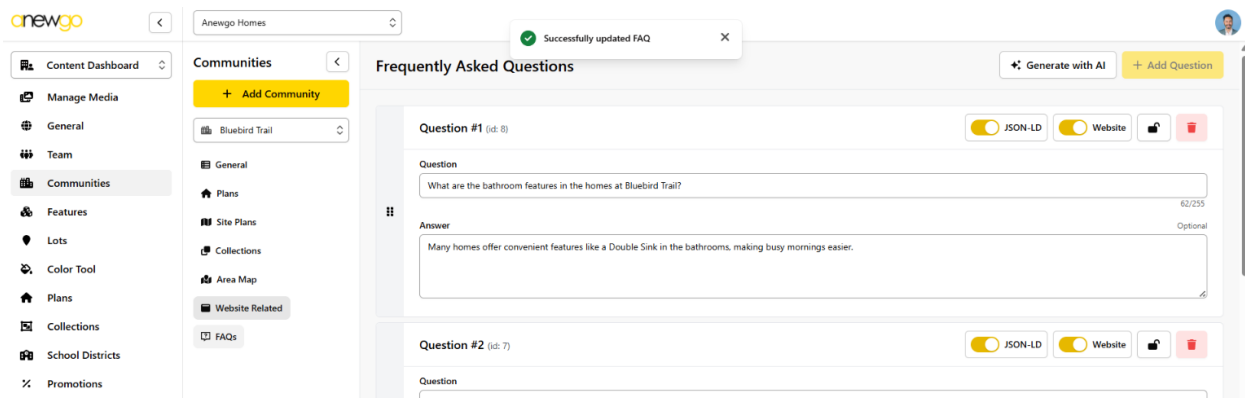

### More control for your team

- **Standard Features Management:** You can now use the new Features page in the Content Dashboard to add and manage standard features and categories, then control how they appear on Community pages and brochures.
- **Manual Ribbon Reordering:** Ribbons can now be manually reordered, making it easier to decide which highlights appear first across homes, plans, or communities.
- **Flexible Community & Plan Detail Ranges:** You can now show ranges for details like price, bedrooms, bathrooms, and square footage when a single exact value does not tell the full story.
- **Spec Value Display Format Dropdown:** A new dropdown in Website Configuration lets you choose whether to show a range or a “Min+” value for your spec data.

- **Revamped Lot Data Import/Export:** The export and import functionality has been redesigned, allowing lots to be bulk updated much easier and quicker.

## Supercharged FAQs

- **SEO and AEO-Friendly FAQ sections** are all schema markup enabled to increase your chances of showing up in searches and AI conversations
- **Community, Plan, or Inventory Specific:** choose to have our AI generate your FAQs based on your plan, community, or inventory data
- **AI-generated FAQs** choose to have our AI generate your FAQs based on your plan, community, or inventory data

## Improvements and Bug Fixes

- **Increased Form Security.** We're blocking more spam with the introduction of HoneyPot fields, while optimizing reCAPTCHA thresholds on Sign In / Registration forms.
- **Live Preview Exterior Images:** Exterior images in live website previews no longer appear incorrectly mirrored.
- **Community Pricing Accuracy:** Community pricing now pulls the correct elevation information instead of falling back to the wrong plan-level value.
- **Lot Selection Popups:** Plan display names and aliases now properly appear in lot selection popups.
- **Lot Image Ordering:** Image ordering now behaves more consistently and images maintain their proper designated order.
- **Media Tab Video Support:** Media tab handling has been upgraded to better support uploaded video files.
- **Caption Preservation:** Gallery and feed captions now carry through more reliably, helping teams preserve helpful image context across connected experiences.
- **Inventory Card Updates:** Inventory card images now update automatically when gallery changes are made.
- **Webhook Event Visibility:** Webhook event options now appear for connected app clients as expected.

- **Build-On-Your-Lot Favorites:** Build-on-your-lot favorites now open the correct community modal instead of leading shoppers to the wrong page.
- **Brochure Image Inclusion:** Brochures now include the expected lot inset image when the website summary includes it.
- **Canadian Location Search:** Inventory location search better supports Canadian municipalities.
- **iOS Mobile Videos:** Mobile (iOS) community videos no longer force an unwanted full-screen experience on affected devices.
