Anewgo Release Notes - Oct 27, 2026

Summary of recent features, enhancements, and system improvements for builder teams.

✨ New Features & Enhancements

- **Community-Level Floor Plan View & Pricing:** You can now view and manage floor plans directly at the community level within the Content Dashboard. This lets you set and display community-specific values (such as localized pricing and option square-footage overrides) without affecting global plan defaults.
- **Organization Profile Page:** Adds a dedicated profile page where you can easily view and update your organization and account details.
- **Monthly AI Credits for Alt-Text:** Introduces 300 shared monthly credits to automatically generate photo alt-text and FAQs. Completed bulk-generation drafts are safely saved even if monthly credits run out.
- **Global Interior Designer Disclaimer:** Adds an organization-wide disclaimer managed in Console that displays as a persistent footer across supported products in the Interior Designer, while keeping your existing room-specific pop-ups.

🐛 Bug Fixes & UI Improvements

- **Inventory Virtual Tours:** Fixed inventory pages to load the correct tour links and automatically converted YouTube links into embeddable virtual tours across all website themes.
- **Preserve Floorplan Hotspot Assignments:** Saving hotspot updates on one floor plan no longer accidentally overwrites or removes hotspot assignments on another plan.
- **Location-Tab Switching:** Smoother navigation when switching between Communities, Build On Your Lot (BOYL), and Scattered Lots.
- **Retain Selected County in BOYL:** Keeps the homebuyer's selected county active throughout the design flow and shows county context in plan summaries.
- **Negative Option Values & Credits:** You can now enter negative costs, dimensions, or room counts in Content Dashboard to support option credits and deductions.
- **Welcome Email Reply-To Settings:** Ensured customer welcome emails correctly use your configured storefront Reply-To email address.
- **Community-Specific Plan Cards:** Community plan cards now accurately display only the elevations and specs assigned to that specific community.
- **Fixed Broken Page Links & Redirects:** Resolved 404 errors and draft redirect conflicts when reverting page names or updating website URLs.
- **Higher FAQ Limit:** Increased the limit from 7 to 10 FAQs per page across editing, saving, reordering, and website display.

- **Upload Filename Validation:** Added strict file name checks to reject invalid upload file names, preventing broken logos or media images from appearing in email clients.
- **Reorder Sub-Header Navigation:** Added easy ordering controls for sub-header navigation bars, ensuring consistent display on both mobile and desktop.
- **Safeguarded Bulk Lot-Status Editing:** Added protective checks to prevent accidental mass sales-status updates unless the Site Plan filter is actively selected.
- **Flexible Lasso Primary Source:** Upgraded the Lasso Primary Source field to a required free-text entry to better support custom setup preferences.
- **Mobile Siteplan Expansion:** Added a full-screen view option for siteplans on mobile devices while keeping zoom, pan, filters, and interactive controls easily accessible.
- **Google Ads Attribution in Lasso:** Added support for capturing Google Click IDs (GCLID) and passing them directly into custom forms in Lasso.
- **Selected Options Brochure Summary:** Floor Plan Configurator brochure PDFs now include an optional features summary page whenever options are selected.
- **Clean Team Member Profile URLs:** Fixed website profile link validation so spaces or mixed-case letters in team member URLs no longer break profile pages.
- **Empty Scheme Exclusions Handling:** Added a helpful message when no color schemes are assigned, preventing blank or broken screens.
- **Exclude Archived Elevations:** Archived elevations are now automatically hidden from active selection choices.
- **Mobile Lot Popup Accessibility:** Improved mobile popup buttons and controls so they are easier to tap and use on smartphones.
- **Floorplan SVG Text Display:** Fixed special character display issues so floorplan text and labels render clearly across all screens.
