Anewgo Release Notes - Oct 13, 2026

Summary of recent features, enhancements, and system improvements for builder teams.

✨ New Features & Enhancements

Media Library Enhancements

- **Batch Actions:** Select subfolders and images together within a folder to move or delete them simultaneously.
- **Folder Reorganization:** Move folders and their entire contents to another folder or directly to the top level.
- **Drag-and-Drop & Direct Upload:** Drag items into folders within the grid or sidebar, and upload files directly into a specific folder.
- **Enhanced Navigation:** View subfolders directly above the media grid, open an item's folder location directly from "All Media," and navigate parent folders using breadcrumbs or keyboard controls.
- **Alt-Text Generation:** Generate alt-text drafts for an entire folder's images or selected images automatically.
- **Unfiled Media Handling:** Clarified confirmations for folder deletions—media inside a deleted folder automatically moves to Unfiled Media.

Media Folder Default Sorting

Media folders and subfolders now sort alphabetically by default, using natural numeric ordering for cleaner folder structures.

Exterior Previews Optimization

Improved exterior previews by preserving native image aspect ratios and narrowing the schemes panel to maximize visible image space.

🛠️ Core Bug Fixes & System Improvements

- **Brochure Webhooks Location Data:** Corrected brochure webhook location data to use the city's state rather than its metro's state (e.g., preventing locations like Farmington, NY from sending as Farmington, MN).
- **Inventory Lot Page Permissions:** Authorized builder users can now access Inventory Lot pages without requiring Website or Marketing App access.

- **Retired Elevation Pricing:** Retired elevations no longer affect collection “From” pricing calculations on community cards.
- **URL & Sitemap Consistency:** Improved URL consistency across pages with lowercase routing, canonical tags, and normalized sitemap URLs.
- **Brochure PDF Display Aliases:** Brochure PDFs now respect configured plan display-name aliases.
- **Similar Plans State Filtering:** Similar Plans now properly respect state filtering and exclude plans located in other states.
- **Community Map Alternate Pricing:** Community map popups now correctly display Alternate Price Text when configured.
- **XML Feed Gateway Timeout:** Increased gateway timeout to accommodate longer-running XML feed requests without dropping connection.
- **XML Feed Elevation Fallbacks:** XML feeds now fall back to offered elevations when a plan’s default elevation is unavailable in a specific community.
- **Community Group Display:** Fixed an issue where the first community group was missing on the community listing page.
- **Color Tool Material Assignment:** Palette material assignment selection displays only that builder's assigned materials instead of global options.
- **Elevation Options Visibility:** Archived elevations are hidden from plan elevation lists and can no longer be selected as defaults.
- **Virtual Tour Feeds:** Feeds now separate virtual tour links correctly: Zillow feeds use Zillow-specific links, while Novi Home and other feeds use standard links.
